

ANTI-DRAFT CHAMBER 153

release date: 22-08-2018

The anti-draft chamber 153 is used to protect weighed products against air drafts that may occur at the workstation.

The protection against air drafts has influence on the measurement accuracy. The chamber eliminates vibrations of product weighed under the influence of ambient conditions.

It is an additional equipment of the PS.R2 and PS.X2 balances equipped with 128x128mm weighing pan. The chamber has to be ordered as a set with the balance due to a fact that it has to be assembled during the production process.
